

Week 3 Submission Report

Student: Akshay

Project: Backend Development - Week 3

Objective

Configure environment variables, implement request logging, and add a health check endpoint using Express.

Tasks Completed

- Installed and configured dotenv.
- Created a .env file for application settings.
- Loaded environment variables in app.js.
- Added request logging middleware.
- Created the /health endpoint.
- Verified the server runs on `http://localhost:3000`.
- Tested `/`, `/about`, `/contact`, and `/health` successfully.

Expected Health Response

```
{"status":"OK","application":"APP_NAME","version":"APP_VERSION"}
```

Result

The Week 3 objectives were completed successfully. The Express application now supports environment variables, request logging, and a health monitoring endpoint.
